

# Shon Patel

Information Systems Security · SOC Analyst · Blue Team

Mumbai, Maharashtra | +91 8169937592 | shonpatel07@gmail.com | linkedin.com/in/shonpatel | github.com/Dabbepe

## Professional Summary

B.Sc. IT undergraduate specialising in information systems security, with hands-on experience in intrusion detection, vulnerability assessment, system access log monitoring and analysis, and implementing secure operating environments. Built and operated a working AI-powered SOC platform and a multi-machine SIEM lab, applying established security standards and continuously improving detection and analysis workflows. Actively studies attacker TTPs, risk assessment methodologies, and defensive best practices through penetration testing labs and CTF challenges, and applies that knowledge to build stronger, more practical security controls.

## Education

### Bachelor of Science in Information Technology

2023 – 2026

Chikitsak Samuha's Patkar Varde College, Mumbai | University of Mumbai | CGPA: 9.19 / 10.0

## Experience

### Cybersecurity Intern | Quick Heal Foundation

Aug – Oct 2024

- Conducted 10+ structured cybersecurity awareness sessions for 1,000+ students covering cyber hygiene, phishing identification, social engineering, virus management, and online fraud prevention.
- Researched high-priority threat categories including UPI fraud, SIM swapping, and identity theft, translating technical risk findings into clear guidance for non-technical audiences.
- Collaborated with the outreach team to coordinate and deliver sessions across multiple institutions; received an Appreciation Letter for contributions to the programme.

## Projects

### SOCAI: AI-Powered SOC Analyst Platform

[socai.vercel.app](https://socai.vercel.app)

- Designed and built a centralised security monitoring platform covering 5 core workflows: system access log analysis, alert triage, phishing and web application threat investigation, IOC enrichment, and automated incident reporting.
- Implemented intrusion detection logic with MITRE ATT&CK mapping across 5 log source types (Syslog, Windows Event Logs, Zeek, Suricata, custom formats); average analysis time under 3 seconds per event.
- Integrated VirusTotal and AbuseIPDB for real-time threat intelligence enrichment, IP reputation scoring, and domain/hash lookup, supporting risk assessment across 3 threat intelligence sources.
- Built correlation rules to continuously improve alert quality, reduce false positive noise, and surface high-priority security events from large log streams.

### SOC Home Lab: Splunk & Sysmon

- Designed and implemented a secure multi-OS virtual environment (Windows 11, Ubuntu Server, Kali Linux) with centralised log collection across 4 sources, network segmentation, and system hardening per security best practices.
- Conducted vulnerability assessments and simulated 8+ attack techniques across 4 MITRE ATT&CK tactics; monitored and analysed system access logs to detect unauthorised activity and policy violations.
- Performed intrusion detection using Sysmon telemetry; triaged alerts, documented false positives, and escalated confirmed threats following defined playbook procedures.
- Executed web application and network-based vulnerability scanning using Nmap and Burp Suite; analysed results and documented risk assessment findings and remediation recommendations.

## Technical Skills

**Information Systems Security:** Intrusion Detection, Vulnerability Assessment, Risk Audits, System Access Log Monitoring, Virus Management, Password Auditing, System Hardening, Network Security, Database Security Concepts

**Security Operations:** SIEM (Wazuh, Splunk), Alert Triage, Threat Detection & Hunting, Incident Response, Log Analysis, IOC Analysis, False Positive Analysis, Correlation Rules, Digital Forensics

**Vulnerability & Web Security:** Nmap, OWASP ZAP, Burp Suite, Metasploit, Web Application Scanning, Network Scanning, OSINT, Phishing & Email Header Analysis

**Frameworks:** MITRE ATT&CK, SOC Playbook-based Analysis, Incident Escalation Procedures, Evidence Preservation, Risk Assessment Methodology

**Tools:** Sysmon, Wireshark, Scapy, Tcpdump, Volatility (Memory Forensics), Kali Linux, Autopsy

**Networking:** TCP/IP, HTTP/HTTPS, DNS, ICMP, ARP, Packet Analysis, Traffic Capture, Firewall Configuration

**Programming & Development:** Python, FastAPI, REST APIs, JWT, WebSockets, React.js, Docker, SQLite, Linux Scripting, Git

**Platforms:** TryHackMe, Hack The Box, LetsDefend (Blue Team Labs), BTLO, PicoCTF

## Certifications

- Cisco Networking Academy: Certified Ethical Hacker (CEH)
- ERASMUS+ CS4ALL: Real-Time Threat Detection and Mitigation

## Achievements & Recognition

- Best Process Compliance Winner, Cyber Shiksha for Cyber Suraksha Awards 2025 (national-level cybersecurity initiative)
- Appreciation Letter from Quick Heal Foundation for cybersecurity outreach to 1,000+ students.
- Highest Scorer in FYBSc IT and SYBSc IT across the batch.
